Last Mile Care
Job description

About LMC: Last Mile Care (LMC) is an early-stage startup working in the primary healthcare sector to provide accessible and affordable healthcare to all that started in 2019. We are currently setting up our flagship assisted telemedicine centers - 1Care Clinics - which are easily accessible points of contact to provide professional teleconsultation & referral services, affordable medicines, and diagnostic services. These clinics also provide health financing & insurance products to increase health coverage and reduce out-of-pocket expenditure.

Job title: Tech specialist

Location: Gurugram

Requirements -

Experience: 3-5 years experience in Node.js backend development
Qualification: Bachelor's or Master's degree in Computer Science or a related field

Key roles & expectations:

- Develop scalable backend systems using Node.js and other related technologies
- Build RESTful APIs that will be used by other developers and third-party partners
- Build all support infrastructure to scale our data delivery pipelines - endpoints, security, logging, messaging
- Integration of user-facing elements developed by front-end developers with server-side logic

- Work with the product team to understand the requirements and translate them into technical specifications
- Ensure code quality by writing unit and integration tests, conducting code reviews, and using best practices
- Optimize application performance and scalability by using appropriate tools and techniques
- Debug and troubleshoot production issues and provide timely resolutions
- Experience in building RESTful APIs using Node.js
- Strong understanding of software development principles, such as agile methodologies, design patterns, and clean code practices
- Creating database schemas that represent and support business processes & scaling, tuning API services, querying DBs
- Excellent problem-solving skills and ability to work independently or as part of a team
- Good communication skills and ability to collaborate with cross-functional teams Good-to-have skills:
- Strong analytical and problem-solving skills paired with the ability to develop creative and efficient solutions.
- Customer-focused with good multi-tasking capabilities having experience of working in a dynamic environment.
- Knowledge of open-source tools & frameworks, and cutting-edge technologies around server-side development.
- Familiarity with microservices architecture and containerization technologies such as Docker and Kubernetes

CTC: *As per experience and industry standards*
